

MERP SUPPORT SERVICES

CONSULTING SERVICES FOR METHANE EMISSIONS REDUCTION PROGRAM (MERP): SUPPORT FOR OIL & GAS OPERATORS

WHAT WE OFFER

Our team helps you navigate the complexities of the MERP, ensuring that your project meets all eligibility and prioritization criteria for maximum funding approval. Our services include:

Eligibility Assessment & Application Support

- We evaluate your wells to determine eligibility based on production rates, well types, and land status.
- We guide you through the application process, ensuring all required well site data and compliance documents are provided to ensure prioritization.

Prioritization Strategy

- We identify and prioritize wells based on high methane emissions potential, proximity to disadvantaged communities, sensitive receptors, and environmental risks.
- By leveraging the PRIMO Tool, we help rank wells based on emission reduction efficiency, ensuring you select the most impactful wells for abandonment.

Grant Administration & Reporting

- We manage the day-to-day administration of your grant, ensuring compliance with all program requirements.
- We assist with ongoing data reporting and transparent communication of project outcomes through a dedicated online platform.

Implementation Guidance

- From well pad preparation to surface restoration, we support the physical aspects of well plugging and abandonment in line with state and local regulations.
- We assist in managing activities to maintain strict adherence to timeline and quality standards for continued eligibility and successful project completion.

ELIGIBILITY & PRIORITIZATION SUPPORT

We help identify wells that meet the eligibility criteria:

- **Marginal Conventional Wells (MCWs)** producing ≤ 15 barrels of oil equivalent per day (BOED) or ≤ 90 thousand cubic feet (Mcf) of gas.
- **Non-Federal Lands:** Only wells located on non-federal land qualify.
- **Well Type:** Conventional vertical wells are eligible; horizontal or unconventional wells do not qualify.

WHY CHOOSE US?

- **Expert Guidance:** With years of experience in environmental consulting and oil & gas operations, our team is equipped to handle all aspects of the MERP.
- **Streamlined Process:** We simplify the often complex regulatory landscape and help you avoid common pitfalls in the application and implementation process.
- **Enhanced Community Impact:** By focusing on reducing emissions from wells near sensitive communities, you contribute to both environmental sustainability and public health improvements.
- **Maximized Funding Opportunities:** Our comprehensive approach increases your chances of securing grant funding, especially for small business operators managing fewer wells.
